## Week 14 -Read and Reason: Omni-

Directions: Read the following posting at a local zoo and answer the questions.

### Zoo Posting

Many dinosaurs were omnivores, eating both plants and meat. In fact, many human beings are also omnivores, for we often go to a restaurant and order a salad before our dinner of steak, chicken, or fish. Being an omnivore, moreover, means that one is omnivorous, eating any kind or many different kinds of food, including both plants and animals.

Wanting to be omniscient, many scientists wish they knew more about the different plants the omnivores would eat.

1. What is an omnivore? How do you know? \_\_\_\_\_
